

MediBook — Cold Outreach Email Templates

Four targeted email templates for different clinic types, plus follow-up sequence, demo request script, and objection handling guide.

How to use this kit: Replace all **[BRACKETS]** with your actual details before sending. Attach the one-pager PDF. Use Template 1 for solo dental clinic owners, Template 2 for dental chains/groups, Template 3 for medical equipment/software resellers (channel partners), Template 4 for dental franchise groups and Apollo White Dental-type chains. Always personalise the opening line with something specific about the recipient's clinic.

Template 1 — Solo Dental Clinic Owners

Best for: Independent dentists, solo practitioners, single-location clinics with 1–3 chairs

HIGHEST
FIT

TO [Dr. First Name], Owner at [Clinic Name] — find via Practo/JustDial/Google Maps

SUBJECT **Cut no-shows by 60% — your patients can now book on WhatsApp (setup takes 1 day)**

ATTACH MEDIBOOK_ONE_PAGER.pdf

Hi Dr. [First Name],

I noticed [Clinic Name] on [Practo/Google Maps/JustDial] — you're well-reviewed, and I imagine appointment no-shows and last-minute cancellations are still a real headache.

I run MediBook — a WhatsApp appointment booking service for dental clinics across India. Your patients message your clinic's WhatsApp number, pick a doctor, choose a date and time, and get an instant confirmation. No app to download. No forms to fill. Nothing new for them to learn.

What MediBook handles automatically:

- WhatsApp booking, rescheduling, and cancellation — 24/7, without staff involvement
- Dental intent shortcuts — a patient types "braces" or "root canal" and the bot routes them to the right specialty instantly, no menu-hopping required
- Voice message support — patients can send a voice note saying "I have a toothache" and the bot transcribes it, processes it, and routes them correctly
- Emergency shortcut — patients who type "toothache" or "emergency" get your clinic contact information immediately
- Automatic 24h + 2h reminders before each appointment, including pre-visit dental checklists (bring X-rays, avoid eating before certain procedures, etc.)
- Waiting list — when your slots fill up, patients automatically join a waitlist and get a WhatsApp alert the moment a slot opens; no booking is ever truly lost
- Post-appointment 5-star feedback — the bot automatically asks patients for a rating after each visit; you see all responses in your dashboard, no Google Forms needed
- Session resumption — if a patient starts booking and drops off, the bot re-engages them up to 24 hours later to complete the booking
- Real-time admin dashboard — live appointment updates across all devices without

refresh; view waiting list patients and notify them with one click

Clinics typically see a 50–60% reduction in no-shows within the first 30 days. Reception saves 50+ manual calls per week that were previously spent on confirmations and reminders alone.

The Starter plan is free for up to 3 dentists (no credit card required). The Growth plan is ₹1,999/month for up to 10 dentists — less than the revenue from two recovered appointments.

I'd love to give you a 10-minute live demo using the built-in bot tester — no Meta account or WhatsApp setup needed to see the full booking flow. Would this week work?

Best,

[Your Name]

[Phone] | [Email]

PERSONALISATION TIPS

- Mention the specific platform where you found them (Practo, JustDial, Google Maps)
- Reference their specialisation if listed ("I saw you specialise in orthodontics")
- Offer to demo with their actual clinic name already loaded

Template 2 — Dental Chains & Multi-Location Groups

Best for: Clove Dental, Dentalkart, Sabka Dentist, regional chains, 3+ location groups

STRATEGIC
FIT

TO [Name], COO / Operations Head / Head of Franchisee at [Chain Name]

SUBJECT **WhatsApp booking across all your [Chain Name] branches — one platform, one dashboard**

ATTACH MEDIBOOK_ONE_PAGER.pdf

Hi [First Name],

Managing appointment volume across [X] branches of [Chain Name] at scale is genuinely hard — especially when booking still happens by phone at most locations.

MediBook is a multi-tenant WhatsApp appointment booking SaaS built specifically for clinic groups like yours. Each branch gets its own WhatsApp bot and admin dashboard. You get a group-level super admin view across all locations.

What this means for [Chain Name]:

- Each branch books via its own WhatsApp number — patients message the same local number they already know
- Central dashboard shows appointment volume, doctor utilisation, and no-show rates across all branches in real time, without refreshing
- New branches can be added in under 24 hours — no IT project required
- Automated 24h + 2h WhatsApp reminders across every branch, with pre-visit dental checklists — zero staff effort
- Holiday and doctor leave managed centrally — mark a closure or leave once and every affected branch's slots block automatically, with no manual coordination needed
- Group-level feedback analytics — see average star ratings per branch and per dentist, collected automatically via WhatsApp after each appointment, across your entire group
- Waiting list management across branches — when one location fills up, reception can view waitlisted patients and check availability at the next nearest branch, so no patient is permanently lost
- Dental intent shortcuts — patients type "root canal" or "braces" and the bot routes them to the right specialty instantly at whichever branch they contact

We're currently onboarding multi-location groups on the Professional (₹4,999/mo) and Enterprise (₹9,999/mo) plans, which include white-labelling, priority support, and custom onboarding.

I'd welcome a 20-minute conversation with you or your operations team to walk through what this looks like for [Chain Name] specifically.

Open to a call this week?

Best regards,

[Your Name]

[Phone] | [Email]

PERSONALISATION TIPS

- Reference their branch count specifically if known
- If they're a franchise, emphasise the franchisor dashboard angle
- Offer to show how they can migrate all branches in a single week

Template 3 — Medical Equipment & Software Resellers

(Channel Partners)

GOOD
FIT

Best for: dental equipment vendors, dental EMR/practice management software resellers, billing software companies with dental clinic client base

TO [Name], Founder / Sales Head at [Company]

SUBJECT **Add a recurring SaaS revenue line to your dental client base — no engineering needed**

ATTACH MEDIBOOK_ONE_PAGER.pdf

Hi [First Name],

You already sell to dental clinics across [region/India]. Getting them to buy once is the hard part — and you've done it.

MediBook is a WhatsApp appointment booking SaaS for dental clinics and dental chains. We're looking for reseller partners who already have clinic relationships and want to earn a recurring commission on every subscription they refer.

Here's how the partner programme works:

- You introduce MediBook to your existing clients — we handle setup, support, and billing
- You earn a recurring commission (15–25%) on every active subscription for as long as the client stays
- Your clients get a product they'll genuinely use — no-show reduction, WhatsApp bookings, automated reminders, patient feedback collection, waiting list management, and holiday/leave scheduling, all included
- No engineering or integration work on your end

The product practically sells itself in a demo. MediBook includes a built-in bot tester — you can show the complete live WhatsApp booking flow to any clinic owner in under 5 minutes, directly inside the admin dashboard, without needing any Meta account or WhatsApp setup on their side.

Every plan includes the full feature set: waiting list, 5-star post-appointment feedback, holiday and doctor leave management, audit logs, role-based access, and a real-time dashboard — there are no hidden feature gates below the headline price. Clinics see

their first measurable no-show reduction within 30 days of going live, which is your renewal insurance.

With just 30 active clients on the Growth plan, that's ₹9,000–₹15,000/month in passive recurring commission.

Partners also get co-branded collateral, a reseller dashboard, and white-label options on Enterprise.

Would it make sense to have a quick call to see if this is a fit?

[Your Name]

[Phone] | [Email]

PERSONALISATION TIPS

- Name-drop the types of clinics they already serve if known
- Emphasise the "your clients already trust you" angle — MediBook adds value without displacing their product
- Offer a co-branded demo for their next client visit

Template 4 — Dental Franchise Groups & Branded

Chains

ENTERPRISE

Best for: Apollo White Dental, Clove Dental corporate team, Dentalkart, branded multi-city dental franchise operators

TO [Name], CEO / COO / VP Operations at [Franchise Group]

SUBJECT **WhatsApp booking across all [Franchise Name] locations — one platform, one super-admin dashboard**

ATTACH MEDIBOOK_ONE_PAGER.pdf

Hi [First Name],

Running a dental franchise across [X] cities means your booking experience varies wildly by location — some branches take WhatsApp manually, some by phone, some via a receptionist. Patients don't get a consistent experience, and corporate has no visibility into appointment volume or no-show rates.

MediBook is a multi-tenant WhatsApp appointment booking SaaS built specifically for dental chains like [Franchise Name].

What MediBook gives your franchise network:

- Every branch gets its own WhatsApp booking bot — patients message the same local number they know
- Corporate super-admin dashboard — see appointment volumes, no-show rates, and doctor utilisation across all locations in real time, without refresh
- Consistent patient experience — same booking flow, same reminder messages, same confirmation format at every branch
- New locations onboard in under 24 hours — no IT project, no custom development
- White-label option available — "Powered by [Franchise Name]" branding on every patient message
- Centrally manage all dentist leaves and branch holidays across your entire franchise — set it once and slots block automatically at every affected location, with no manual coordination between branches
- Franchise-wide feedback analytics — the bot collects a 5-star rating from every patient after each appointment via WhatsApp; your operations team can see average ratings per location and per dentist to identify underperforming branches quickly
- Built-in waiting list across the franchise — when one location fills up, patients join a

waitlist and get notified automatically when a slot opens, so no patient is permanently lost to a competitor

- Your franchise operations team can demo the full booking flow using the built-in bot tester — no Meta account needed, runs live inside the dashboard in under 5 minutes

Automated 24h and 2h WhatsApp reminders — with pre-visit dental checklists — reduce no-shows by 50–60%. On average, that's ₹15,000–40,000 in recovered consultation revenue per branch per month.

We're onboarding franchise groups on our Enterprise plan (₹9,999/month for unlimited dentists across all branches), with dedicated onboarding support and a custom setup call for your first 5 locations.

I'd welcome a 20-minute call with you or your operations team. I can pre-configure a live demo with [Franchise Name]'s branch structure and doctor roster before we speak.

Open to a call this week?

Best regards,

[Your Name]

[Phone] | [Email]

PERSONALISATION TIPS

- Research how many locations they have — reference the exact count ("across your 47 [Franchise Name] locations")
- Mention a specific pain point of franchise dental ops — inconsistent patient experience, no central reporting
- Offer to demo with their actual franchise name and branch structure pre-loaded

Follow-Up Sequence — After Sending the Cold Email

DAY 0 — SEND

Send cold email with one-pager attached

No call to action beyond "worth a conversation?" — keep it low pressure.

DAY 4 — FIRST FOLLOW-UP

Short bump email

Subject: "Re: [original subject]" — just reply to the same thread.

Body: "Hi [Name], wanted to make sure this didn't get buried. Happy to share the full technical deck if you'd like a closer look — no commitment needed. Let me know either way."

DAY 10 — VALUE-ADD FOLLOW-UP

Add something new — don't just chase

Share a relevant stat or news item. Example: "Thought you'd find this relevant — dental clinics using WhatsApp-based booking see 50–60% fewer no-shows in the first 30 days, simply because the reminder is in the same app patients already check constantly. Happy to share a quick demo."

DAY 18 — FINAL NUDGE

One last short message, then let go

Body: "Hi [Name], I'll keep this brief — I wanted to follow up one last time — we're currently rolling out a free 14-day trial to new clinics onboarding this month. Happy to set this up for [Clinic Name] if timing works."

DAY 30+ — MOVE ON

No response after 4 touches = not interested

Move them to a low-priority list. Try a different contact at the same clinic, or revisit in 60 days. When they do respond, always offer the free trial as the first step.

Demo Request — When They Show Interest

When a prospect replies and wants to see MediBook in action, send this before scheduling a call:

Subject: MediBook demo — [Your Name]

Hi [Name],

Great to hear from you! I'd love to show you MediBook in action.

The demo takes about 15–20 minutes and covers:

- Live WhatsApp bot flow (book, reschedule, cancel — from the patient's perspective)
- Admin dashboard tour (manage doctors, slots, and appointments)
- Reminder system (how the 24h and 2h reminders work)
- Quick setup walkthrough (so you can see how fast onboarding is)

I can pre-load your clinic name, dentist names, and treatment types before the call so it feels like your clinic from day one.

A few times that work for me:

[Day 1] — [Time range]

[Day 2] — [Time range]

Or let me know what works for you.

🗨️ Objection Handling — Common Pushbacks and How to Respond

OBJECTION	WHAT THEY MEAN	HOW TO RESPOND
"Our patients aren't tech-savvy"	Fear of patient adoption	"Your patients already use WhatsApp — this is literally just them sending a message. No app, no login, no form. They can even send a voice note saying 'I have a toothache' — the bot transcribes it and routes them to the right dentist. If they can send a message to a family member, they can book with you."
"We already have a receptionist"	No perceived need	"MediBook doesn't replace your receptionist — it frees them from 50+ calls a day so they can focus on patients in front of them. Most receptionists love it."
"₹1,999/month seems expensive"	Price sensitivity	"One missed consultation at ₹500 is ₹500 lost. MediBook prevents 15–20 no-shows a month. That's ₹7,500–₹10,000 recovered for ₹1,999 spent. And the Starter plan is free."
"We'll set it up later / not now"	Low urgency	"Totally understand. The free Starter plan has zero commitment — 3 dentists, 200 appointments per month, completely free with no credit card required. Start there, see the no-show reduction, and upgrade only if it makes sense. Setup takes less than a day."
"What about data privacy / HIPAA?"	Compliance concern	"Each clinic's data sits in its own completely isolated PostgreSQL schema — your patients' records are structurally separate from every other clinic on the platform, not just access-controlled but physically partitioned. WhatsApp access tokens are encrypted AES-256. Every staff action is written to a full audit log with role-based access controls. We're hosted on Railway (SOC 2 compliant infrastructure)."
"We tried something like this before and it didn't work"	Past bad experience	"I'd like to understand what happened. Most failures are from tools that required a new app download or a website login — MediBook works

OBJECTION	WHAT THEY MEAN	HOW TO RESPOND
-----------	----------------	----------------

purely on WhatsApp, which changes the adoption dynamic completely."

Golden rule: Never argue with an objection — acknowledge it first, then reframe. "I hear you — [X] is a real concern. Here's how we handle it..." always lands better than a direct counter.

Quick Reference — What to Send at Each Stage

STAGE 1 — COLD Cold email + MEDIBOOK_ONE_PAGER.pdf	STAGE 2 — INTEREST Demo request email → schedule 20-min call	STAGE 3 — DEMO Live WhatsApp demo + admin dashboard tour
STAGE 4 — TRIAL Set up free 14-day trial with their clinic name	STAGE 5 — CLOSING Upgrade to paid plan + onboarding call
