THE PROBLEM

Dental clinics are losing patients every day

Over 1,50,000 dental clinics and practices in India rely on phone calls and WhatsApp chats managed manually by staff — an error-prone, expensive, and patient-unfriendly system that costs clinics lakhs in lost revenue every year.

67%

Missed Calls = Missed Revenue

Clinics miss over 60% of after-hours appointment calls. Each missed call is a lost patient — often worth ₹400–₹2,000 per visit. Calls that go to voicemail are never returned.

20–30%

No-Shows With No Advance Warning

1 in 4 booked appointments results in a no-show. With no automated reminder system, clinics have no advance warning — dentist chairs sit empty and revenue is permanently lost.

3–4hrs

Staff Buried in Manual Scheduling

Receptionists spend 3–4 hours daily manually taking bookings, calling reminder calls, and updating registers — time better spent on patient care. 50+ calls per week, per clinic.

0%

No Systematic Patient Feedback

Most clinics collect zero structured post-visit feedback. Problems go undetected, poor experiences go unaddressed, and online reputation suffers — all invisibly.

∞

Full Slots = Permanently Lost Patients

When a patient finds no available slots, they call the next clinic. Without a waiting list, that patient is gone forever — even if a slot opens the very next day.

500M+

WhatsApp is Untapped for Booking

500 million Indians use WhatsApp daily — yet no India-native WhatsApp bot for dental clinic appointment booking exists at scale.

THE SOLUTION

MediBook solves it with WhatsApp automation

Patients book, reschedule, and cancel appointments in under 3 minutes — by simply sending a WhatsApp message. No app downloads. No waiting on hold.

Natural WhatsApp Bot Flow

Patients select specialty, doctor, date, and time through an intelligent conversational bot powered by Meta WhatsApp Cloud API. Supports buttons, lists, and text. Async BullMQ queue for scale. Session resumes automatically if booking is interrupted — 24-hour window.

Dental Intent Shortcuts

Patients don't need to navigate menus. Type "braces" → Orthodontics auto-selected. "Root canal" → Endodontics. "Whitening" → Cosmetic Dentistry. "Emergency" or "toothache" → clinic contact shown instantly. Natural language routes patients to the right service in one message.

Multi-Tenant SaaS Architecture

Each dental clinic or chain gets their own isolated schema, WhatsApp number, and bot. One platform serves hundreds of practices simultaneously with full data isolation — one clinic never sees another's patient data.

Real-Time Admin Dashboard

Admin dashboard with live SSE updates across all open browser tabs — no refresh needed. Includes calendar view, waiting list management, feedback ratings tab, audit logs, and CSV export. Doctor and reception portals included.

Smart Reminders & Feedback Collection

WhatsApp reminders at 24h and 2h before appointments with department-specific pre-visit checklists. Patient confirms YES/NO — response is logged. After the visit, a 5-star feedback request is sent automatically via WhatsApp, with results visible in the dashboard.

Waiting List — No Slot Left Behind

When a patient finds no available slots, they join an automated waiting list via WhatsApp. The moment a cancellation opens a slot, they're notified instantly and can book with one reply. Full slots convert into future revenue instead of lost patients.

Voice Message Support

Patients can send WhatsApp voice notes describing their issue — the bot transcribes them via OpenAI Whisper and processes them as booking text. No typing required. Feature-flagged per clinic, so it's enabled only where relevant.

Smart Slot & Holiday Management

Doctor schedules generate time slots automatically with atomic slot locking to prevent double-booking. Nightly cron extends 60 days ahead. Admins mark holidays and doctor leave — slots are auto-blocked and no appointments are accepted on those dates.

Enterprise Security & Audit Trail

JWT auth with 30-day refresh tokens, AES-256 encryption of WhatsApp tokens at rest, Meta webhook SHA256 signature verification, per-tenant rate limiting (60 msg/min), login rate limiting (10 attempts/15 min), and complete staff audit logs — actor, IP, timestamp, and old/new values for every change.

Role-Based Access & Service Catalog

Admin, staff, and doctor roles with scoped permissions. Full dental service catalog — define services with names, categories, durations, and prices. Bulk appointment updates, patient anonymisation for compliance, and bot tester built into the dashboard (no real Meta credentials needed to demo).

MARKET OPPORTUNITY

A massive, underpenetrated Indian healthcare market

India's digital health market is growing at 27% CAGR. WhatsApp is already the primary communication channel for hundreds of millions of patients. MediBook sits at this perfect intersection.

CONSERVATIVE TAM CALCULATION

0.3% Penetration of 1.5L Dental Clinics = ₹420+ Crore Annual Revenue Potential

At ₹1,999/month average ARPU × 450 clinics (0.3% of 1.5L) = ₹5.4Cr ARR. At 3% penetration = ₹54Cr ARR. At scale, a ₹420Cr+ opportunity across India's dental market.

See how it works

MediBook ships with a complete patient-facing WhatsApp bot, a clinic admin dashboard, and a super-admin panel for managing all tenants.

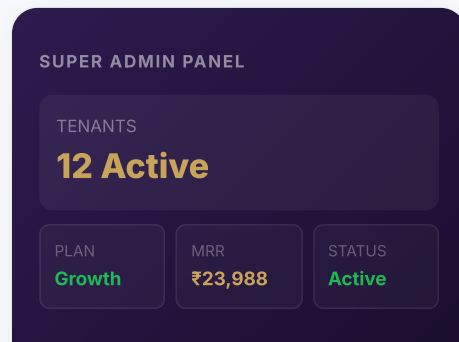

WhatsApp Bot with Dental Intent Shortcuts

Patients type naturally — "braces", "root canal", "whitening", "toothache" — and the bot routes them to the right specialty automatically. No menu navigation needed. Full booking in under 3 minutes via interactive WhatsApp buttons.

Real-Time Clinic Admin Dashboard

Clinic admins see live SSE stats (no refresh needed), calendar view, all appointments with bulk actions, waiting list management, 5-star patient feedback tab, audit logs, doctor leave, holiday management, service catalog, and CSV export — in a clean Next.js interface.

Super Admin Panel

Platform owner manages all tenants, creates new clinics, updates plans and WhatsApp credentials, monitors platform-wide stats and billing.

Production-grade stack, built for scale

Every component was chosen for reliability, performance, and scalability. The codebase is clean, documented, and ready for a developer to extend immediately.

BACKEND

- Node.js + Express (REST API + /api/v1 aliases)
- PostgreSQL 15 (schema-per-tenant)
- Redis + BullMQ (async bot queue, pub/sub SSE)
- node-cron (slots, reminders, backup, retry jobs)
- bcryptjs + JWT + Joi validation
- Resend email API (deduplicated, open-tracked)
- Winston logging + AsyncLocalStorage request IDs
- Per-tenant rate limiting + distributed cron locks

FRONTEND

- Next.js 14 (App Router)
- Tailwind CSS (utility-first)
- React 18 with hooks
- Admin, Doctor, Reception & Super Admin portals
- SSE real-time dashboard updates
- Axios with auth interceptors
- Recharts analytics + CSV export

INTEGRATIONS & INFRA

- Meta WhatsApp Cloud API v18 (official — no BSP fees)
- OpenAI Whisper API (voice message transcription)
- Resend email API (confirmations, reminders, resets)
- Redis + BullMQ (async queue, rate limiting, SSE pub/sub)
- PostgreSQL 15 (schema-per-tenant isolation)
- Interactive buttons + list messages + templates + fallback
- SHA256 HMAC webhook signature verification
- Sentry error tracking · Docker Compose · Railway · Vercel
- AES-256 encryption · nightly pg_dump backup

WHAT'S INCLUDED

Everything you need to launch from day one

This is not a skeleton or MVP. MediBook is a complete, tested, documented product with every component needed to onboard paying dental clinics immediately.

Full Backend Source Code

Node.js + Express API with 10+ route files, middleware, and background jobs (BullMQ worker, reminder cron, slot generation cron, backup cron, webhook retry). Includes waiting list, audit trail, feedback collection, holiday management, doctor leave, bulk appointment actions, and patient anonymisation. Clean, structured, ready to extend.

Complete Frontend Application

Next.js 14 admin dashboard, doctor portal, reception portal, super admin panel, new tenant wizard, and reset password flow. Includes live SSE real-time updates, calendar view, waiting list tab, patient feedback/ratings tab, audit log viewer, bot tester (demo the bot without real Meta credentials), and Recharts analytics.

Database Schema & Migrations

Full PostgreSQL schema with schema-per-tenant isolation, service catalog, audit log, email sent log, backup log, migration scripts, and seed data generator.

WhatsApp Bot Engine

Complete 15-state conversational bot with booking, cancellation, reschedule, reminders, and fallback handling. Includes dental intent shortcuts, voice transcription via OpenAI Whisper, waiting list, session resumption (24h window), 5-star post-visit feedback, opt-out/opt-in (STOP/START), emergency shortcut, and circuit breaker. Async BullMQ processing with sync fallback.

Email & SMS Notification Services

Resend integration with deduplication guard, open-tracking pixel, bounce/complaint webhook handler, and SMS service stub ready for any provider.

Super Admin Panel + Tenant Wizard

Platform-level admin interface to create tenants, manage plans and credentials, monitor platform-wide stats. Guided wizard for new clinic onboarding.

Marketing Strategy Document

50+ page HTML/PDF/PPTX go-to-market strategy with channel-by-channel acquisition plans, partnership templates, and growth roadmap.

Full Technical Documentation

Architecture overview, 40+ endpoint API reference, deployment guides for Railway and Vercel, environment setup, and troubleshooting guide.

IDA-Aligned Dental Onboarding Playbook

Clinic onboarding guide aligned with Indian Dental Association member practices, covering WhatsApp setup, patient communication templates, and go-live checklist.

Patient data protected to enterprise standards

MediBook was built with clinic data security as a first-class requirement — not an afterthought. Every dental clinic's patient records are completely isolated from every other clinic on the platform.

Complete Data Isolation Per Clinic

Each clinic's data is stored in a completely isolated database schema. Your patient records never touch another clinic's data — not even in a shared table. Schema-per-tenant PostgreSQL 15 architecture.

AES-256 Encryption at Rest

WhatsApp access tokens are encrypted with AES-256 before being stored in the database. Even if the database were compromised, your WhatsApp credentials cannot be read in plain text.

Complete Staff Audit Trail

Every staff action is logged — login, appointment edits, cancellations, patient record access — with actor name, IP address, timestamp, and old/new values. Know exactly who accessed patient data, when, and from which device.

Rate Limiting & Attack Protection

Per-tenant WhatsApp rate limiting (60 messages/minute), per-phone limiting (5 messages/minute), login rate limiting (10 attempts per 15 minutes per IP), and Meta webhook SHA256 HMAC signature verification on every incoming message.

COMPETITIVE ADVANTAGE

Why choose MediBook over building or using alternatives?

✗ Build From Scratch

- 🕒 12–18 months of development time
- 💰 ₹25–40 lakh in developer salaries
- 🐛 Months of debugging WhatsApp API edge cases
- 🏢 Multi-tenant architecture is notoriously complex
- 📉 High execution risk — most startups never ship

⚠️ Generic Booking Apps

- 📱 Require patients to download an app (low adoption)
- 🌐 Not built for India's WhatsApp-first behavior
- 🔒 Vendor lock-in — you don't own the IP
- 💎 High per-user fees that kill margins at scale
- 👤 No super-admin for managing multiple clinics

✅ Buy MediBook

- ⚡ Launch in days, not months or years
- 🦷 Dental-specific — intent shortcuts, service catalog, dental workflows
- IN Built for India's WhatsApp-first patient behaviour
- 💬 WhatsApp-native — no app download, no website login required
- 📧 True multi-tenant SaaS with recurring revenue model
- ⌚ Waiting list, voice support, 5-star feedback — all built in
- 🔑 You own the IP, the data, and the customer relationship

SUBSCRIPTION PLANS

Choose your subscription plan

Four transparent subscription tiers to match the size of your dental practice — from solo dentists to large multi-branch dental chains. 14-day free trial on all paid plans. No setup fee. Cancel anytime.
